

## PIPE ADAPTER

Install Antennas on Existing Larger Ground Mounted Poles

### DESCRIPTION

This device allows you to install a smaller DBS type antenna on top of an existing metal pipe. Typically, this would be an old C-band type ground pin of approximately 3.5" O.D. but any steel pipe which is securely mounted and stationary would work.

The adapter has a slotted end which slips down over the exposed open end of a pipe and then tightens down with two provided grade five hex head bolts. The attached adapter then provides a smaller diameter short mounting pole for the smaller antennas.

The adapter is available in a 1 5/8" O.D. or a 2.0" O.D. The adapters are grey powder coated steel.

We suggest that this device secures best to round pipes. Flat steel does not provide enough grip.

### FEATURES

- Utilize an existing vertical pipe for installing a new DBS antenna
- Heavy Steel Construction
- Grey powder coated
- Grade five snub bolts
- Two O.D.s available for most satellite antennas
